JURISDICTIONAL DETERMINATION U.S. Army Corps of Engineers

DISTRICT OFFICE: Walla Walla (CENWW) FILE NUMBER: NWW-2006-759-B01 PROJECT LOCATION INFORMATION: State: Idaho County: Ada Center coordinates of site (UTM): Approximate size of area (parcel) reviewed, including uplands: 100 acres. Name of nearest waterway: Middleton Mill Canal Name of watershed: Boise River JURISDICTIONAL DETERMINATION Completed: Desktop determination Date: November 29, 2006 Site visit(s) Date(s): **Jurisdictional Determination (JD):** Preliminary JD - Based on available information, there appear to be (or) there appear to be no "waters of the United States" and/or "navigable waters of the United States" on the project site. A preliminary JD is not appealable (Reference 33 CFR part 331). Approved JD – An approved JD is an appealable action (Reference 33 CFR part 331). Check all that apply: There are "navigable waters of the United States" (as defined by 33 CFR part 329 and associated guidance) within the reviewed area. Approximate size of jurisdictional area: *. ☑ There are "waters of the United States" (as defined by 33 CFR part 328 and associated guidance) within the reviewed area. Approximate size of jurisdictional area: 0.5 acres. There are "isolated, non-navigable, intra-state waters or wetlands" within the reviewed area. Decision supported by SWANCC/Migratory Bird Rule Information Sheet for Determination of No Jurisdiction. BASIS OF JURISDICTIONAL DETERMINATION: A. Waters defined under 33 CFR part 329 as "navigable waters of the United States": The presence of waters that are subject to the ebb and flow of the tide and/or are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce. B. Waters defined under 33 CFR part 328.3(a) as "waters of the United States": (1) The presence of waters, which are currently used, or were used in the past, or may be susceptible to use in interstate or foreign commerce, including all waters which are subject to the ebb and flow of the tide. (2) The presence of interstate waters including interstate wetlands¹.

(6) The presence of territorial seas.
(7) The presence of wetlands adjacent² to other waters of the US, except for those wetlands adjacent to other wetlands.

Rationale for the Basis of Jurisdictional Determination (applies to any boxes checked above). If the jurisdictional water or wetland is not itself a navigable water of the United States, describe connection(s) to the downstream navigable waters. If B(1) or B(3) is used as the Basis of Jurisdiction, document navigability and/or interstate commerce connection (i.e., discuss site conditions, including why the waterbody is navigable and/or how the destruction of the waterbody could affect interstate or foreign commerce). If B(2, 4, 5 or 6) is used as the Basis of Jurisdiction, document the rationale used to make the determination.

(4) Impoundments of waters otherwise defined as waters of the US.
(5) The presence of a tributary to a water identified in (1) − (4) above.

(3) The presence of other waters such as intrastate lakes, rivers, streams (including intermittent streams), mudflats,

destruction of which could affect interstate commerce including any such waters (check all that apply):

(i) which are or could be used by interstate or foreign travelers for recreational or other purposes.

(ii) from which fish or shellfish are or could be taken and sold in interstate or foreign commerce.

(iii) which are or could be used for industrial purposes by industries in interstate commerce.

sandflats, wetlands, sloughs, prairie potholes, wet meadows, playa lakes, or natural ponds, the use, degradation or

An unnamed, man-made irrigation ditch and drain ditch received water from a controlled ground water well. Applicant has now turned water off to the ditch. The ditch was constructed deep enough to encounter ground water; however, the ditch has a culvert crossing that was installed prior to 1960 that is set higher than the bottom of the ditch. With the well water turned off, the section of ditch upstream of the culvert no longer flows through the culvert. The water elevation in the ditch is 10 to 12 inches below the bottom of the culvert. Under normal circumstances the upper section of ditch will no longer be connected to the lower section.

If B(7) is used as the Basis of Jurisdiction, document the rationale used to make adjacency determination:

Based on Supreme Court ruling in the court case of SWANCC v US Army Corps of Engineers, No. 99-1178, the Department of the Army no longer has jurisdiction over isolated, non-navigable, intrastate water of the United States, if the sole nexus to interstate commerce is the use of the waters by migratory birds. Because the upper section of ditch is no longer connected to the lower section, the upper section is isolated and no longer jurisdictional under the Clean Water Act.

Other jurisdictional man-made ditches and canals on the property include the lower section of the east-west ditch starting at the roadway culvert, the Middleton Mill Canal, and several irrigation return water ditches. These man-made ditches and canals are jurisdictional Category 5 waters. They all flow to the Boise River, which is Category 5 water which flows to the Snake River, an interstate Category 2 water.

	eral Extent of Jurisdiction: (Reference: 33 CFR parts 328 and 329)
\boxtimes	Ordinary High Water Mark indicated by: High Tide Line indicated by:
	☐ clear, natural line impressed on the bank ☐ oil or scum line along shore objects
	the presence of litter and debris fine shell or debris deposits (foreshore)
	changes in the character of soil physical markings/characteristics
	destruction of terrestrial vegetation tidal gages
	shelving other: *
	other: *
	Mean High Water Mark indicated by:
	☐ survey to available datum; ☐ physical markings; ☐ vegetation lines/changes in vegetation types.
	Wetland boundaries, as shown on the attached wetland delineation map and/or in a delineation report prepared by:
Bas	is For Not Asserting Jurisdiction:
	The reviewed area consists entirely of uplands.
	Unable to confirm the presence of waters in 33 CFR part 328(a)(1, 2, or 4-7).
	Headquarters declined to approve jurisdiction on the basis of 33 CFR part 328.3(a)(3).
\boxtimes	The Corps has made a case-specific determination that the following waters present on the site are not Waters of the United
	States:
	Waste treatment systems, including treatment ponds or lagoons, pursuant to 33 CFR part 328.3.
	Artificially irrigated areas, which would revert to upland if the irrigation ceased.
	Artificial lakes and ponds created by excavating and/or diking dry land to collect and retain water and which are used
	exclusively for such purposes as stock watering, irrigation, settling basins, or rice growing.
	Artificial reflecting or swimming pools or other small ornamental bodies of water created by excavating and/or diking
	dry land to retain water for primarily aesthetic reasons.
	Water-filled depressions created in dry land incidental to construction activity and pits excavated in dry land for the
	purpose of obtaining fill, sand, or gravel unless and until the construction or excavation operation is abandoned and
	the resulting body of water meets the definition of waters of the United States found at 33 CFR 328.3(a).
	☐ Isolated, intrastate wetland with no nexus to interstate commerce.
	Prior converted cropland, as determined by the Natural Resources Conservation Service. Explain rationale: *
	Non-tidal drainage or irrigation ditches excavated on dry land. Explain rationale: *
	Other (explain): *
DA'	TA REVIEWED FOR JURSIDICTIONAL DETERMINATION (mark all that apply):
	Maps, plans, plots or plat submitted by or on behalf of the applicant.
	Data sheets prepared/submitted by or on behalf of the applicant.
	☐ This office concurs with the delineation report, dated *, prepared by (company): *
	This office does not concur with the delineation report, dated *, prepared by (company): *
	Data sheets prepared by the Corps.
	Corps' navigable waters' studies: *
	U.S. Geological Survey Hydrologic Atlas: *
	U.S. Geological Survey 7.5 Minute Topographic maps: Star, Idaho
	U.S. Geological Survey 7.5 Minute Historic quadrangles: *
	U.S. Geological Survey 15 Minute Historic quadrangles: *
	USDA Natural Resources Conservation Service Soil Survey: *
	National wetlands inventory maps: *
	State/Local wetland inventory maps: *
	FEMA/FIRM maps (Map Name & Date): *
	100-year Floodplain Elevation is: * (NGVD)
	Aerial Photographs (Name & Date): *
	Other photographs (Date): *
	Advanced Identification Wetland maps: *
	Site visit/determination conducted on: *
	Applicable/supporting case law: *
	Other information (please specify): Observation by consultant and applicant that water no longer flows past the culvert
	obstruction

¹Wetlands are identified and delineated using the methods and criteria established in the Corps Wetland Delineation Manual (87 Manual) (i.e., occurrence of hydrophytic vegetation, hydric soils and wetland hydrology).

²The term "adjacent" means bordering, contiguous, or neighboring. Wetlands separated from other waters of the U.S. by man-made dikes or barriers, natural river berms, beach dunes, and the like are also adjacent.
